

BITFOLD

Security Convenience Trust

BITFOLD will be a personal, hardware mobile vault for digital assets and authentication.

At our lab, the team of experts designed a unique technology, that provides the security of the cold wallet in a standalone, internet-connected device.

*Bitfold is a hardware wallet under development. Some of the indicated features and functionalities are not yet available on the device and may change. The presented graphics are sample visualizations of the device and they may change.

The number of cryptocurrency holders increases every year

Our lives are becoming increasingly embedded in the digital reality, resulting in the birth and growth of further digital assets.

This trend brings new challenges.

Hardware and Software

Business

Crypto users - We base our business model on both the sales and usability of our devices and the software we develop (BitfoldOS).

Business and governments - Our operating system will have the ability to seamlessly integrate with various use cases based on asymmetric cryptography: i.e. banking systems, identity verification, **access to sensitive data, document signing, etc.**

our patented technology in the US and the EU, based on the air gap solution, ensures the highest standard of safety

Funds raised: over \$10.72 million

our device is stand-alone, you don't need to connect it to your computer or phone to make the transfer

Breakthrough technology

Enclosed in a convenient and secure device

Highest Security

Full hardware isolation of cryptographic keys

Anti-tampering safeguards
(TrustZones, digital DNA, BIST, PUF)

Dedicated system BitfoldOS

Amplified entropy source
(entropy from the real world)

Panic button
(ability to erase keys in the face of danger)

Premium Design

Wireless charging

Biometrics for enhanced convenience

PREMIUM materials, IP65 standard
(splash and dust resistance)

5.5-inch high-end AMOLED
touchscreen display

Ultra-fast and intuitive interface
